BDP Digital Music Players

Bryston's BDP digital music players let you hear a perfect replica of high resolution studio masters with incredible detail and breathtaking realism. Unlike other digital music players, our sole purpose is to play your music with the greatest possible fidelity without the burdens of deep computer knowledge.

Manage your music in the way that works best for you. Whether you store your music on a large network attached storage (NAS) system, or on portable USB hard drives, the BDP products can perfectly play nearly every format available including DSD, FLAC, Apple Lossless, AIFF, WAV, MP3 and more.

Control the system with your existing devices. Our built-in HTML5 web app is compatible with virtually all modern tablets and smartphones. Connect your BDP to your network via built in ethernet for ultimate speed or with one of our WiFi options.

Unlike most competing players, the BDP-3 features a linear power supply which does not radiate high frequency switching noise into sensitive high precision digital audio circuitry.

You can choose between the ultra high value BDP-π and the flagship BDP-3. Both are bit-perfect, sound incredible and feature legendary Bryston quality.
